Prerequisites

- PixInsight version 1.8.9-2 build 1597 or higher

1. PixInsight
<https://pixinsight.com/>

- GraXpert version 3.0.0 or higher

2. GraXpert
<https://www.graxpert.com/>

- ⚠ The signature of the GraXpert Process won't be recognized with a PixInsight version lower than the recommended version.
- ✓ After installation, make sure that the GraXpert User Interface is working fine.
- ✓ Process an image in AI mode through the GraXpert user interface to trigger the download of the default AI models.
- ✓ You can load multiple AI models if needed, but generally, only the latest one is useful.
- ✓ GraXpert Process will display all locally available AI models after downloading.

PixInsight

- **PixInsight** is both astrophotography image processing software and a software platform that allows developers to introduce new features through scripts and modules.
- **PixInsight** has implemented a mechanism for signing modules and scripts to secure its platform. It is strongly advised not to install unsigned scripts or modules.
- **PixInsight** Forum is dedicated to PixInsight support and should not be considered as a support forum for scripts or modules developed on this platform.
- Please respect this rule...

- ✓ Please report any issues related to the GraXpert Process on my support website or via email (see references section).
- ✓ Do not use the PixInsight forum or PixInsight support for this purpose.

GraXpert

- **GraXpert** is an open-source software designed to remove gradients from astrophotos caused by external interferences such as light pollution.
- **GraXpert** enhances the aesthetics of deep-sky photos, simplifies post-processing, and enables the removal of color dominances.
- **GraXpert** operates independently and exclusively dedicated to this task.
- You can join the GraXpert community on Discord [Dark Matters](#).

✓ The software can be downloaded from their GitHub [Steffenhir/GraXpert](#).

Features GraXpert Process for PixInsight

- **AI Background Extraction** with full control of parameters (smoothing, correction mode and AI model version).
- **AI Denoising** with full control of parameters (strength, batch size for performances optimization and AI model version).
- **Realtime preview** (restricted to denoising).
- **Export PixInsight photography** to GraXpert user interface.
- **Import GraXpert processed photography** into PixInsight.
- **Create** new image or **replace** active image.
- **Restore photography metadata** after AI processing.
- **Display GraXpert logs** into PixInsight console.

GraXpert Process Installation

- ⚠ Don't forget the "/" at the end of the installation URL.
- ✓ Process is compatible with Windows, MacOS, and Linux platforms.

1. Go to **PixInsight ► RESOURCES ► Updates ► Manage Repositories.**
2. Click "**Add**" and enter the URL
<https://pixinsight.deepskyforge.com/update/graxpert-process/>
3. Click "**Ok**".
4. Go to **PixInsight ► RESOURCES ► Updates ► Check for updates.**
5. PixInsight should display GraXpert Process package,
6. Click on "**Apply**".
7. PixInsight should confirm the loading of updates; click "**Ok**".
8. Exit PixInsight and confirm the installation of updates.
9. PixInsight will restart and install the packages.
10. GraXpert process can be found under menu **PROCESS ► <Etc>**

GraXpert Process after installation

The screenshot displays the 'PROCESS' window in GraXpert. The window is divided into two columns of process names. The left column includes: <All Processes>, Astrometry, BackgroundModelization, ChannelManagement, ColorCalibration, ColorManagement, ColorSpaceConversion, ColorSpaces, Compatibility, Convolution, Deconvolution, Ephemerides, FastIntegration, Flux, Fourier, Geometry, and Global. The right column includes: Painting, Photometry, PixelMath, Preprocessing, Render, Spectrophotometry, StarCatalogs, TotalGeneralizedVariation, and Wavelets. Below these is an '<Etc>' button. A context menu is open over the '<Etc>' button, listing: GraXpert (with a gear icon), NetworkService, NoOperation, ProcessContainer, Sandbox, and Script. A speech bubble points to the 'GraXpert' entry in the context menu with the text '1. GraXpert Process.'

Process Name	Shortcut

Restore 358 propertie(s)
GraXpert successfully completed
8.953 s

Ready [Pause/Abort]
```

- ⚠ The first execution may take time if you have never loaded the AI model.
- ✓ GraXpert Process takes care of restoring astrometric data after AI processing.
- ✓ In case of any issues, all GraXpert logs will be displayed in the console.
- ✓ If support is requested, please activate option "Show GraXpert logs" and send a copy of the console.

1. You can stop GraXpert processing at any time.

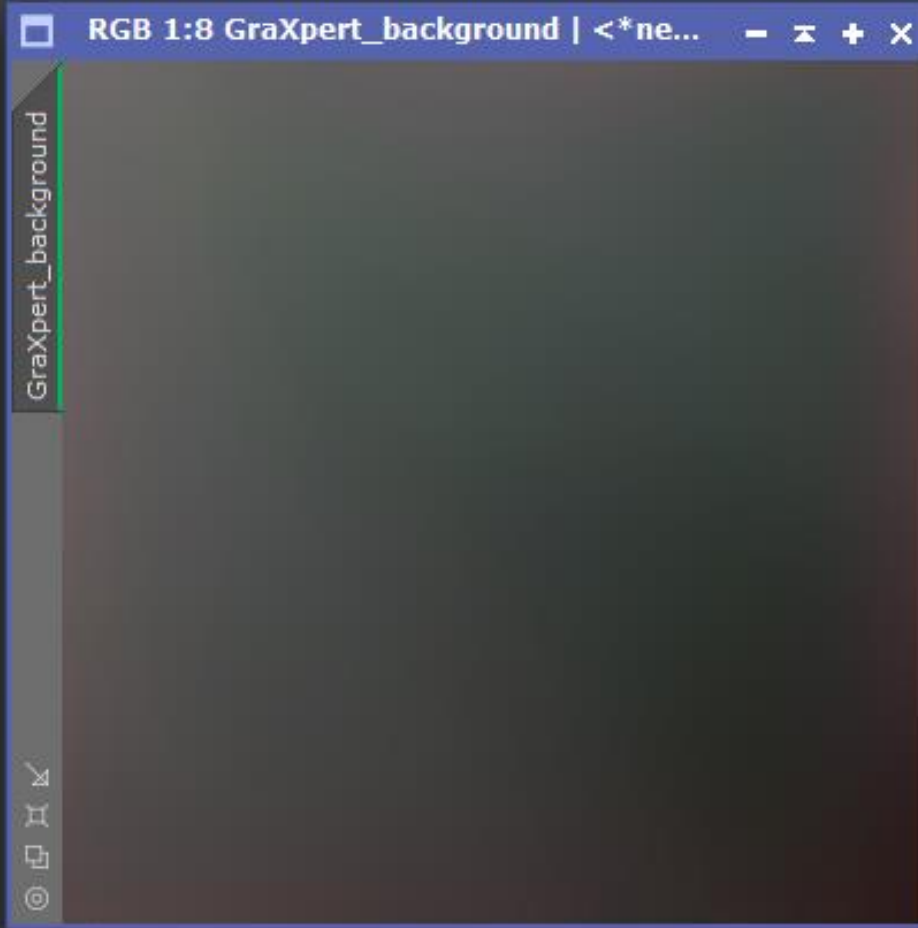

Display processed images

1. Processed image

2. Gradient

- ✓ The display of the gradient is optional.
- ✓ You can choose to replace the original view or create a new one.
- ✓ If Screen Transfer was activated on the original photo, it will be applied to the processed view.

- DON'T FORGET THE TRAILING SLASH "/"

No need to contact PixInsight support in case of issues with GraXpert Process or the GraXpert user interface.

- ✓ Please contact the support related to the module itself.

Technical information Windows platform

• Default path to GraXpert

- `C:\Users\<NAME>\AppData\Local\Programs\GraXpert\GraXpert.exe`
- Another possibility: `C:\Program Files\GraXpert\GraXpert.exe`

• Preferences, AI models and GraXpert Logs

- `C:\Users\<NAME>\AppData\Local\GraXpert\GraXpert\preferences.json`
- `C:\Users\<NAME>\AppData\Local\GraXpert\GraXpert\ai-models\`
- `C:\Users\<NAME>\AppData\Local\GraXpert\GraXpert\Logs\graxpert.log`

• Preferences and parameters GraXpert Suite for PixInsight

- `C:\Users\<NAME>\AppData\Local\GraXpert4PixInsight\preferences.cfg`
- `C:\Users\<NAME>\AppData\Local\GraXpert4PixInsight\path.cfg`

- ✓ You can modify the path to GraXpert during its installation.
- ✓ You can install multiple versions of GraXpert, but they will all use the same preference file, which can potentially cause issues or confusion.
- ✓ You can delete the directories `\AppData\Local\GraXpert` or `\AppData\Local\GraXpert4PixInsight` to force a reset to default settings.
- ✓ The download of the AI model is done by GraXpert during the first image processing in AI mode. This may take several minutes.

Technical information macOS platform

- **Default path to GraXpert**

- */Applications/GraXpert.app/Contents/MacOS/GraXpert*

- **Preferences, AI models and GraXpert Logs**

- */Users/<NAME>/Library/Application Support/GraXpert/preferences.json*
- */Users/<NAME>/Library/Application Support/GraXpert/ai-models/*
- */Users/<NAME>/Library/Application Support/GraXpert/Logs/graxpert.log*

- **Preferences and parameters GraXpert Suite for PixInsight**

- */Users/<NAME>/Library/Application Support/GraXpert4PixInsight/preferences.cfg*
- */Users/<NAME>/Library/Application Support/GraXpert4PixInsight/path.cfg*

- ✓ You can modify the path to GraXpert during its installation.
- ⚠ You can install multiple versions of GraXpert, but they will all use the same preference file, which can potentially cause issues or confusion.
- ✓ You can delete the directories **<TBC>** or **<TBC>** to force a reset to default settings.
- ✓ The download of the AI model is done by GraXpert during the first image processing in AI mode. This may take several minutes.

Technical information Linux platform

• Default path to GraXpert

- *Recommended: /opt/bin/ with symbolic link in /usr/bin/*
- Symbolic link creation: `sudo ln -s /opt/GraXpert/GraXpert /usr/bin/graxpert`

• Preferences, AI models and GraXpert Logs

- */home/<NAME>/.local/share/GraXpert/GraXpert/preferences.json*
- */home/<NAME>/.local/share/GraXpert/ai-models/*
- */home/<NAME>/.local/share/GraXpert/Logs/graxpert.log*

• Preferences and parameters GraXpert Suite for PixInsight

- */home/<NAME>/.local/share/GraXpert4PixInsight/preferences.cfg*
- */home/<NAME>/.local/share/GraXpert4PixInsight/path.cfg*

- ✓ You can modify the path to GraXpert during its installation.
- ⚠ You can install multiple versions of GraXpert, but they will all use the same preference file, which can potentially cause issues or confusion.
- ✓ You can delete the directories **<TBC>** or **<TBC>** to force a reset to default settings.
- ✓ The download of the AI model is done by GraXpert during the first image processing in AI mode. This may take several minutes.

Certified PixInsight Developer

- GraXpert process is released under Certified PixInsight Developer ID JoelVallier
- If you encounter certificate error during installation please
 - Make sure you are using PixInsight 1.8.9-2 build 1597 or higher.
 - Type the command 'lscpd' in the PixInsight console.
 - Check if my certificate (JoelVallier) is present.
- Contact me through support or via email (see section References).

⚠ No need to contact PixInsight support. ⚠
